Dear Sir/Madam

Discussion Paper *Preliminary Views on Financial Statement Presentation*

On behalf of the European Financial Reporting Advisory Group (EFRAG) I am writing to comment on the IASB/FASB Phase B financial statement presentation project discussion paper *Preliminary Views on Financial Statement Presentation*. This letter is submitted in EFRAG's capacity of contributing to IASB's due process and does not necessarily indicate the conclusions that would be reached in its capacity of advising the European Commission on endorsement of the definitive IFRS.

The discussion paper (DP) deals mainly with the following issues:

- the introduction into IFRS and implementation of three presentation principles concerning cohesiveness, disaggregation and information about liquidity and financial flexibility,
- classification of items into operating, investing, and financing categories, which starts with the classification of assets and liabilities and is then applied to related income, expense and cash flow items,
- the adoption of the direct method in the statement of cash flows, and
- the introduction of a new reconciliation schedule, which would reconcile cash flows to comprehensive income. This reconciliation schedule disaggregates income into its cash, accrual, and disaggregates the remeasurement components (for example, fair value changes).

Financial statement presentation is an issue of fundamental importance, and we are pleased that the IASB has decided to address some of the key issues involved. We also support the decision to do the work as a convergence project with the FASB.

Furthermore, we think the DP contains many good ideas and we support much of what it says. We particularly support the proposal that there should be no change at the current time to the existing requirement to categorise items as either part of net income or as other comprehensive income items. Our detailed comments are set out in the appendix 1 to this letter. Below we highlight our main concerns with the proposals:

- Although we think that cohesiveness is a good principle, we do not think the only way—or indeed best way—to achieve it is to apply an 'everything in the same order and disaggregated to the same extent' rule. Yet we think that is largely what

EFRAG's Comment Letter on the DP 'Preliminary Views on Financial Statement Presentation'

the DP proposes. In our view, it is very important that the implementation of the cohesiveness principle is done in a way that is thoughtful and pragmatic if it is to provide useful, meaningful information. The debate should therefore be primarily about where the balance should be struck.

- Similarly, although we agree with the DP's statement that information should be presented in the financial statements in a manner that disaggregates information so that it is useful, we are not convinced that the detailed proposals get the balance right. We are concerned that there is a risk that the proposals will result in so many lines in the primary financial statements that the key messages of those statements will be obscured. The proposals will also result in an increase in the degree of disaggregation in the financial statements as a whole. Whilst we understand that users want some additional disaggregation, we are concerned that the additional disaggregation the DP proposes should be provided might go beyond what users require.
- From our discussions with others, it would appear that there is a divergence of view as to how much flexibility the DP is proposing to allow preparers when it proposes that a management approach to classification should be adopted. We would not support an approach allowing considerable flexibility on as important an issue as financial statements presentation; however, we do not think that is what is being proposed. We think the DP is proposing that the standard should require the principle set out in paragraph 2.27 of the DP to be applied. (Paragraph 2.27 states that the objective is that the classification of the various assets and liabilities should reflect how each of those assets and liabilities are used in the business). That would mean that, although management will usually have substantial—perhaps even total—discretion as to how the assets and liabilities are used in the business, having exercised that discretion management will have little if any flexibility as to how the assets and liabilities are classified in the statement of financial position. We support such an approach.
- We do not support the proposal that the new standard should require use of the direct method of presenting operating cash flows. We are not persuaded by the DP that such an approach provides information that is more decision-useful than an indirect method and therefore justifies the additional cost that would usually be involved. We prefer the indirect method of presenting operating cash flows in the statement of cash flows.
- We think that, although the proposed reconciliation schedule is a very interesting idea, too many of the numbers that would be disclosed will be of little informational value to justify the cost of preparing the schedule in the form proposed. Our suggestion is that the schedule should be scaled down and should focus instead on remeasurements and large non-cash items. We also suggest that consideration is given to restyling the statement of cash flows so that it can provide a reconciliation of net debt, because we understand that many users would like to be provided with such reconciliation.

We hope that you find our comments helpful. If you wish to discuss them further, please do not hesitate to contact Aleš Novak or me.

Yours sincerely

Stig Enevoldsen
EFRAG, Chairman

Appendix 1: All EFRAG's responses to the questions asked in the discussion paper

GENERAL COMMENT

- 1 Financial statement presentation is an issue of fundamental importance, and we are pleased that the boards have decided to address some of the key issues involved. It is good that the DP has looked afresh at age-old issues and contains new ideas and thinking.
- 2 We also support the decision to do the work as a convergence project with the FASB. A key aspect of the convergence process must be to converge presentation approaches.
- 3 Finally, although we have focused in our responses below to the issues that concern us most, there is also much in the DP that we agree with.

QUESTIONS CONCERNING OBJECTIVES AND PRINCIPLES OF FINANCIAL STATEMENT PRESENTATION

Question 1

Would the objectives of financial statement presentation proposed in paragraphs 2.5-2.13 (cohesiveness, disaggregation, helping users to assess an entity's liquidity and financial flexibility) improve the usefulness of the information provided in an entity's financial statements and help users make better decisions in their capacity as capital providers? Why or why not? Should the boards consider any other objectives of financial statement presentation in this discussion paper? If so, please describe and explain.

- 4 EFRAG broadly supports the proposed objectives as long as they are not applied in an extreme way because that might not result in useful information for users. However, we believe that the above question is best addressed by considering each of the proposed objectives in turn.

Cohesiveness objective (paragraphs 2.5 and 2.6)

- 5 EFRAG thinks that the cohesiveness principle is a good objective in the way that it is described in the opening two sentences of paragraph 2.6 in the DP. However, it quickly becomes apparent that it is applied in the DP as an 'everything in the same order and disaggregated to the same extent' rule; we do not think that is what the cohesiveness principle demands, nor do we think it is appropriate. In our view, it is very important that the implementation of the cohesiveness principle is done in a way that is thoughtful and pragmatic if it is to provide useful, meaningful information.¹ The debate should therefore be primarily about where the balance should be struck.
- 6 For example, under existing IFRSs an entity is required to present its post-employment defined benefit plan assets and obligations as a net asset or net liability. That net asset or net liability would be classified, in the proposed presentational model, in the operating category rather than the financing section

¹ The boards do not strictly follow this principle themselves since, within the categories, the statement of financial position is not divided into functions: it is apparently only the flow statements that have to be cohesive at this level.

(because the net post-employment asset or liability relates to employee remuneration or compensation and because it is not always a financial asset or a financial liability). Following the cohesiveness principle, an entity should then classify the related post-employment benefit expenses, including items such as service cost, interest cost and return on plan assets, and cash flows in the same category as its net post-employment benefit asset or liability—in other words, operating. Yet the extent to which an entity chooses to fund its post-retirement benefit obligations is clearly a financing decision and the interest cost and return on plan assets would appear to be more in the nature of investing or financing items than operating items. The problem here, EFRAG thinks, is that the DP should allow (at least in this case) the flows deriving from a single statement of financial position item to be classified in different categories.

- 7 On the other hand, the DP also proposes that dividends payable on equity shares should be classified as a financing liability in the statement of financial position and the dividend payments on those shares should be classified in the financing category in the statement of cash flows, not the equity section. Such payments will not though be included in the financing section of the statement of comprehensive income, because under IFRSs distributions to owners are not depicted in comprehensive income. Those expecting all flows from an item to be categorised in the same could find this a bit confusing, particularly as some companies might not actually report a liability for dividends payable in their financial statements (because the liability does not arise until after year-end). Some others would say the proposals are pragmatic and show that the DP recognises there are limits to cohesiveness.
- 8 We think what is needed is a thoughtful, pragmatic approach that will result in as little confusion as possible and some classifications that will not make it difficult for users to understand the relationships between the numbers. One possible way of permitting the flexibility that is needed to both meet the overall objective of cohesiveness and provide useful, meaningful information might be for the eventual standard to state that it is presumed that the most useful and meaningful information can be provided by presenting all flows from a single operation within the same category; however, if that presumption can be rebutted, the alternative presentation that results in the most useful and meaningful information being provided should be applied. If the presumption has been rebutted, management would have to explain why classifying all flows from a single operation within the same category would not have provided the most useful information.

Disaggregation objective (paragraphs 2.7 – 2.11)

- 9 EFRAG agrees entities should disaggregate the information in their financial statements in a manner that is useful. However, we have two concerns about the detailed proposals in this area:
 - (a) the risk of disaggregation resulting in a lot of lines in the primary financial statements that might distract users' attention, obscure the messages, and thereby reduce the usefulness of the information provided, and
 - (b) the proposal's focus on assessing future cash flows. These concerns are discussed further below.
- 10 EFRAG agrees with the statement in paragraph 2.10 of the DP about the need to strike the right balance between providing too much information and providing too little. However, we are not convinced that the proposals in the paper always manage to get that balance right.

EFRAG's Comment Letter on the DP 'Preliminary Views on Financial Statement Presentation'

- (a) It seems clear that one effect of the proposals will be to increase significantly the degree of disaggregation provided on the face of the primary financial statements. There is always a risk that, if a lot more lines are presented in the primary financial statements, the result might be that some key messages are obscured, thus perhaps reducing the usefulness of the information. As a consequence, there is an important debate to be had about whether the information should be provided on the face of the financial statements or in the notes. In our view, the disaggregation objective should not always require the information to be provided on the face of the financial statements.
- (b) On the other hand, it is EFRAG's belief that another effect of the proposals will be to increase the degree of disaggregation in the financial statements as a whole. We think this too needs to be considered carefully because it does not follow of course that more and more detail necessarily results in more useful information. We think the DP should have explored this issue further, and would again suggest there is an important debate to be had here.

We think these are also issues that need to be fully explored in the proposed field-testing.

- 11 If the IASB concludes that the degree of disaggregation proposed in the DP is indeed appropriate, EFRAG thinks that one possible way forward might be to allow management discretion as to whether to present the additional information on the face of primary statements or in the notes, as long as minimum disclosure requirements on the face of primary statements are provided.
- 12 When EFRAG responded to the ED *An Improved Conceptual Framework for Financial Reporting—Chapter 1 and Chapter 2*, it expressed concern about the ED's unsupported assertion that the main focus of financial reporting should be on an entity's ability to generate future net cash flows. In our view, the objective of financial reporting proposed in that ED requires a broader focus than merely future cash flows. For that reason, we are also not comfortable with the proposal that the focus of the disaggregation objective should be limited to information that is useful in assessing future cash flows.
 - (a) As a separate but related point, we also expressed concern in responding to that ED that, although the ED states that users need information that helps them make an assessment about future cash flows, it does not go on to explain what sort of information is most useful for that purpose. That makes it difficult to operationalise the disaggregation objective now being proposed.
 - (b) In this context we note that paragraph 2.11 of the DP states that:

“Although the disaggregation objective refers to assessing the amount, timing and uncertainty of future cash flows, the boards understand that users often base their expectations of future cash flows on an analysis of an entity's prospects for creating value in the future. Such analyses often involve forecasts of income, components of income, or cash flows generated from specific activities.”

Although we agree with the paragraph—and would add that ‘such analyses’ often involve other things as well—we are not sure what the relevance is of its inclusion at this point in the DP. Is the intention to suggest that forward looking information such as forecasts should be included in the financial statements?

The liquidity and financial flexibility objective (paragraphs 2.12 and 2.13)

- 13 EFRAG believes that this liquidity and financial flexibility objective has merit, but believes there are also some potential problems with it. In particular:
- (a) we note that there is no direct reference to financial flexibility in the existing IASB Framework or in the proposed revised IASB Framework. We think that, if the notion is to play such a big role in determining the appropriate presentation, it should be probably addressed in the Framework (as, for example, financial adaptability is in paragraphs 1.19 – 1.22 of the UK ASB's Statement of Principles for Financial Reporting).
 - (b) we have already mentioned our concern that the disaggregation objective focuses too much on future cash flows, and we think that is also true of the financial flexibility part of the objective. For example, we think the description of the notion in paragraph 2.13(b) is too narrow; on the other hand, if the reference to 'to alter amounts and timing of cash flows' was omitted (so that the paragraph refers to financial flexibility as involving an ability to take effective action to respond to unexpected needs and opportunities) we would strongly support it.

Are other financial statement presentation objectives needed?

- 14 We think that there are other important objectives for financial statement presentation. However, they apply to financial statements in general and are already stated in the IASB's Framework.
- 15 Having said that, we think it might be useful to explain briefly how the financial statement presentation objectives relate to (and interrelate with) the objectives and qualitative characteristics in the Framework. We assume, for example, that they are thought to flow from those characteristics and therefore do not overrule them in any way, but if that is the case it would be helpful to make that clear.
- 16 One example of why this needs to be clarified is the perceived tension between comparability and the DP's 'management approach'. (This issue is discussed further in our response to question 5).

Question 2

Would the separation of business activities from financing activities provide information that is more decision-useful than that provided in the financial statement formats used today (see paragraph 2.19 of the DP)? Why or why not?

- 17 EFRAG believes that the separation of business activities from financing activities, based on the management approach, would provide information that is decision-useful to users. The approach seems to fit well with the way users work, and is also pretty well in line with the way most industrial entities look at their businesses and currently show their results. However, we note that those in the banking and similar sectors might have difficulties drawing a dividing line between business and financing items.
- 18 In addition, we do not support the operating category presumption in paragraph 2.35 of the DP (that if an entity cannot clearly identify an asset or liability as relating to operating, investing or financing activities, it should be presumed to be an operating item) because we consider that operating income is one of the more useful sub-totals in the proposed financial statement formats and worry that the

sub-total might be made less useful if the operating category is used for items that are hard to classify. Our preference would be to re-name the 'investing' category as the non-operating business items, and to include in that category items that are difficult to categorise.

- 19 We have some concerns about the separation of operating items from investing items, but that is discussed further in our response to question 9 below.

Question 3

Should equity be presented as a section separate from the financing section or should it be included as a category in the financing section (see paragraphs 2.19(b), 2.36 and 2.52–2.55)? Why or why not?

- 20 EFRAG thinks that if the current distinction in the financial statements between equity and liabilities is to be retained, it is appropriate to present non-owner sources of finance separately from owner sources of finance and thus equity should be presented as a section separate from the financing section. We also note that this is the approach that is applied in the IFRSs today and is hence familiar to users.

Question 4

In the proposed presentation model, an entity would present its discontinued operations in a separate section (paragraphs 2.20, 2.37 and 2.71–2.73). Does this presentation provide decision-useful information? Instead of presenting this information in a separate section, should an entity present information about its discontinued operations in the relevant categories (operating, investing, financing assets and financing liabilities)? Why or why not?

- 21 Information about the results of discontinued operations such as the related earnings and cash flows are usually treated differently from the results of continuing operations because they have different implications for future cash flows, so EFRAG believes that it is important that discontinued operations are clearly highlighted in the financial statements.
- 22 However, we think there are grounds for giving some further thought to alternatives to the principle underlying IFRS 5 *Discontinued Operations*, which is that discontinued operations should be presented separately and in a condensed form in the primary financial statements, as for example presentation in a memorandum column or simply in the notes. We would therefore encourage the boards to take another, longer, look at them as soon as possible, ideally in the next step, which is the development of the Phase B exposure draft (ED) of the financial statement presentation project.
- 23 Finally, we think it would be helpful, if the ToolCo illustration of the statement of financial position is to be carried forward into the ED, that the classification of the 'assets held for sale' as discontinued operations is intended to be illustrative only and is not intended to suggest that this is the mandatory classification for the 'assets held for sale'. Certainly that has been our assumption and we would be concerned were it not the case.

Question 5

The proposed presentation model relies on a management approach to classification of assets and liabilities and the related changes in those items in the sections and categories in order to reflect the way an item is used within the entity or its reportable segment (see paragraphs 2.27, 2.34 and 2.39–2.41).

- (a) Would a management approach provide the most useful view of an entity to users of its financial statements?**
- (b) Would the potential for reduced comparability of financial statements resulting from a management approach to classification outweigh the benefits of that approach? Why or why not?**

Some general comments

- 24 Before we comment on the specific issues, we want to make a few general comments about the approach to classification that the discussion paper refers to as 'the management approach' in order to try to provide clarity to a debate that is in danger of getting confused.
- 25 Our first point is that there seems to be some difference of view as to what exactly the management approach proposed in the DP involves.
 - (a) Some seem to view the approach as giving management substantial—perhaps even total—discretion as to how the assets and liabilities are classified in the statement of financial position. If this is indeed the intention behind the proposal, we would be very concerned; we do not think it would be appropriate to permit a 'free for all' in an area as important as financial statement presentation.
 - (b) However, we had not read the DP's proposals in that way. Paragraph 2.27 of the DP states that the objective is that the classification of the various assets and liabilities should reflect how each of those assets and liabilities are used in the business. We had assumed that the proposal is that this should be a key requirement in the final standard. We think that, under such a requirement, although management will usually have substantial—perhaps even total—discretion as to how the assets and liabilities are used in the business, having exercised that discretion management will have little if any flexibility as to how the assets and liabilities are classified in the statement of financial position.
 - (c) We think that it does not help that the DP uses a term ('management approach') that is used elsewhere in IFRS (IFRS 8 *Segment Reporting*) to describe something in respect of which management has almost total discretion. That is not the case in this DP. We think that to avoid misunderstanding and confusion with IFRS 8, the boards should use a different label to 'management approach' to describe what is being proposed.
- 26 Our second point concerns the tension that is sometimes perceived to exist between the adoption of the so-called management approach and comparability. (The wording of the question in (b) is an example of this perceived tension.) If the approach involved management in having considerable discretion to classify items as they wished regardless of other factors, we agree that such tension would exist. However, as already explained that is in our opinion not what the DP intends. In

fact, under the approach proposed (with paragraph 2.27 of the DP as a requirement), management will have little if any discretion as to how items are classified. Two businesses that appear the same at first glance might classify items differently, but that will in most cases be because they do not use their assets and liabilities in the same way. In other words, they look different because they are different. (As with most accounting issues, some judgement will be involved and as a result entities that are the same might classify some items differently, but this will not be the main reason why assets and liabilities will be classified differently.)

- 27 Our third point is that, although comparability is a very desirable attribute, it is important to be realistic about its limitations. For example, it is in our view probably realistic to expect just limited comparability between entities in different industries. On the other hand, comparability between entities within the same industry is a realistic objective.

Would the potential for reduced comparability of financial statements resulting from a management approach to classification outweigh the benefits of that approach? Why or why not?

- 28 For the reasons we have just explained, we do not accept the premise (implicit in the question) that the management approach described in the DP will reduce the comparability of the financial statements—because we think the proposal is that the principle in paragraph 2.27 should be a requirement. In our view it is just as likely to enhance their comparability by highlighting differences between businesses.

Would a management approach provide the most useful view of an entity to users of its financial statements?

- 29 This is a complex issue. EFRAG is aware that in practice there is always a trade-off between different objectives and characteristics in order to maximise the usefulness of the information provided overall.
- 30 On balance, EFRAG thinks an approach based around how the reporting entity organises its activities and uses its assets and liabilities (such as the approach proposed in the discussion paper) will probably provide the most useful information for users. That is because we think that such an approach helps users to understand an entity's business model, which users tell us is essential to enable them to use the financial statements effectively. (EFRAG made reference to this in its comment letter on the ED *An Improved Conceptual Framework for Financial Reporting—Chapter 1 and Chapter 2*.)
- 31 EFRAG's biggest theoretical concerns about the management approach to classification relate to consistency from period-to-period; the risk that entities might continually adjust their classifications, with the effect that it is difficult to compare an entity's financial statements over time. These concerns are based mainly on the experience EFRAG members have had with the use of the management approach to determine the segments to be used for segment reporting purposes, where there are apparently frequent changes and restatements in segment reporting because of internal reorganisations that have no impact on the activities themselves and other factors. However:
- (a) the management approach proposed in the DP does not involve the sort of flexibility or discretion that the management approach in the IFRS 8 *Operating Segments* does, so in many ways it is not a fair comparison; and

- (b) the DP proposes that the classification of assets and liabilities in the operating, investing, financing asset, and financing liability categories would be an accounting policy, and that an entity should explain its basis for classification of items into categories in its accounting policy note disclosure (see paragraphs 4.2–4.4 of the DP). In our opinion this explanation should be a justification for the classification and not just a description. A change in an entity's classification policy would have to be implemented through retrospective application of the new classification policy to prior periods, as required by the IFRSs.

Question 6

Paragraph 2.27 proposes that both assets and liabilities should be presented in the business section and in the financing section of the statement of financial position. Would this change in presentation coupled with the separation of business and financing activities in the statements of comprehensive income and cash flows will make it easier for users to calculate some key financial ratios for an entity's business activities or its financing activities? Why or why not?

- 32 This proposal will have a significant effect on the statement of financial position, because assets of one type will no longer be shown together and the statement will have many more lines than at present. We think this could in the beginning present some difficulties for users, because they are used to the classification on the basis of elements (assets, liabilities and equity) with few (sub)totals. However, having discussed the proposed approach with users, we have reached the conclusion that overall the approach will benefit users as long as the totals of all assets and of all liabilities are also shown on the face of the statement of financial position, especially as the proposed presentational model has the potential to facilitate the calculation of some key financial ratios.

Question 7

Paragraphs 2.27, 2.76 and 2.77 of the DP discuss classification of assets and liabilities by entities that have more than one reportable segment for segment reporting purposes. Should those entities classify assets and liabilities (and related changes) at the reportable segment level as proposed instead of at the entity level? Please explain.

- 33 The issue here is at what level the classification exercise should be carried out. If an entity classified its assets and liabilities at the entity level, it would mean that the classification of the assets and liabilities of each reportable segment of an entity would be the same. So for example, regardless of whether a particular type of financial instrument is used in the entity's banking activities or manufacturing activities, it would be classified in the same category. On the other hand, if an entity classified its assets and liabilities at the reporting segment level, that particular type of financial instrument would be classified differently for each segment if its use in each segment is different. It would also mean that, in the entity level financial statements, there would be very different types of assets and liabilities aggregated together within each classification.
- 34 Although it is simpler to apply an entity level approach—in that only one classification decision needs to be taken for each asset- or liability-type—the boards have concluded that applying the classification guidelines at the reportable segment level should better represent the way an asset or liability is used within an entity because reportable segments usually include operations that are 'through the eyes of the management' similar in nature and economic behaviour.

- 35 EFRAG agrees with this conclusion. In our view, any other approach would not be consistent with the adoption of the management approach.
- 36 In addition we note that some assets and liabilities may be managed at the Chief Operating Decision Maker (CODM) level and not at segment level, meaning that they could be classified only at the entity level. Therefore in our opinion the notes should clearly indicate which items could not be classified at the reportable segment level.

Question 8

The proposed presentation model introduces sections and categories in the statements of financial position, comprehensive income and cash flows. As discussed in paragraph 1.21(c), the boards will need to consider making consequential amendments to existing segment disclosure requirements as a result of the proposed classification scheme. For example, the boards may need to clarify which assets should be disclosed by segment: only total assets as required today or assets for each section or category within a section. What, if any, changes in segment disclosures should the boards consider to make segment information more useful in light of the proposed presentation model? Please explain.

- 37 The requirements of IFRS 8 *Operating Segments* are based on the way that management regards an entity, focusing on information about the components of the business that management uses to make decisions about operating matters. Thus, if a piece of information is not provided to the Chief Operating Decision Maker (CODM) as part of the internal segmental information, it is not required to be disclosed under IFRS 8.² This raises two questions. Firstly, assuming whether the information is provided to the CODM is not an issue, what information about assets and liabilities should be provided at the segment level? And, secondly, should some or all of that information be required even if it is not provided to the CODM?
- 38 We think the second question is relatively straight-forward to answer. For as long as we have a segment reporting standard that is based on the 'through the eyes of management' approach, IFRSs should not require segment information that is not provided to the CODM. EFRAG believes that it would be inconsistent with the 'through the eyes of management' approach adopted in IFRS 8 to require disclosure of certain items that are not reported to the chief operating decision maker.
- 39 Having said that, we would encourage the IASB to carry out an early post-implementation review of IFRS 8 in order to consider whether it is working effectively and in the way intended, and is likely to continue to do that under the proposals set out in this paper.
- 40 So, turning to the first question, if it is deemed sufficient under the current presentation system for entities to disclose only total assets for each segment (rather than say fixed assets, current assets etc.)—when assets are disclosed at all— will it also be sufficient under the proposal just to disclose only the total assets? We are not convinced it will be; or rather we think that if the new classification system's usefulness is to be maximised, it probably will be necessary

² To clarify the example of total assets used in the question, it should be noted that the IASB has recently issued an ED that proposes to amend IFRS 8 and require total assets to be disclosed at the segment level only if it is information that is provided to the Chief Operating Decision Maker.

to require assets and liabilities to be disclosed by category at the segment reporting level—if such information is provided to the CODM.

Question 9

Are the business section and the operating and investing categories within that section defined appropriately (see paragraphs 2.31-2.22 and 2.63-2.67 of the DP)? Why or why not?

- 41 We note that the descriptions of the categories are not very precise. However, we see them as being in the nature of a high-level principle that helps preparers to understand the objectives of the exercise. This, coupled with the DP's clear message that the assets and liabilities should be classified in a way that best reflects the way they are used by the business, should in our view be sufficient to ensure that the discretion in practice is not significant. We are as a result broadly happy with how the business section is described.
- 42 The references in the descriptions to 'related to the central purpose(s) for which the entity is in business' and 'unrelated to the central purpose' suggest to us that the DP's operating and investing categories are based on a notion of 'core' and 'noncore' activities. As the DP explains, this approach is proposed because the boards' preliminary view is that the classification of assets and liabilities based on what management views as related to the central purpose for which the entity is in business will provide more useful information than a narrower or more prescriptive definition of operating and investing.
- 43 However, we thought that some of the references to the investing category in the second sentence of paragraph 2.33 ("an entity may use its investing assets and liabilities to generate a return in the form of interest, dividends or increased market prices") and elsewhere in the DP suggest a rather different notion to a core/non-core split. Therefore we suggest that the investing section is rather labelled as a 'non-operating business section', what would also clearly indicate that the section does not contain any investment in the PPE.
- 44 EFRAG also points out that in some countries (for example Poland) some entities have activities that they have inherited and are not allowed to get rid of. Such activities are not core activities (in that they are not related to the entity's central purpose), but they are also not investing because they are revenue- and expense-generating. Perhaps this example illustrates the point made in the previous paragraph about the confusion the 'investing' label will cause.
- 45 We do not know whether it is within the scope of this project, but thought nevertheless we should mention that users would welcome some sort of information about expenditure that the entity has incurred and expensed that it views as being 'an investment in the future', as for example expenditure for research activities. We recognise that this would be difficult to scope precisely, but think that if a management approach is acceptable for classification purposes it probably ought to be acceptable for the purposes of determining whether expenditure is an investment in the future.
- 46 An entity might use an asset or liability in its business activities for more than one function. For example, an entity's headquarters building might be used in its operations and also be viewed by management as a real estate investment. The boards have yet to discuss how management should classify an item in those

circumstances.³ One possibility would be to classify the asset or liability on the basis of its predominant purpose (operating or investing). This treatment would be consistent with the guidance in the IFRSs for classifying cash receipts and payments that relate to more than one type of activity in the statement of cash flows (DP, paragraph 2.43).

Question 10

Are the financing section and the financing assets and financing liabilities categories within that section defined appropriately (see paragraphs 2.34 and 2.56-2.62)? Should the financing section be restricted to financial assets and financial liabilities as defined in IFRSs and US GAAP as proposed? Why or why not?

- 47 EFRAG is not convinced that the DP is right to prohibit the inclusion of non-financial assets and liabilities in the financing category. Conceptually all liabilities could be viewed as sources of finance and thus labelled financing liabilities. However, if the view is that liabilities that relate to a specific operating activity should be classified in the operating category, the remaining liabilities would indeed be composed mainly of financial liabilities—but we do not see why it should follow from that that the financing category should exclude non-financial items. The DP talks (in paragraph 2.62) about “adding objectivity to the classification process” by restricting the financing category to financial assets and financial liabilities, but we find that argument wholly unconvincing. Objectivity is not added by arbitrarily excluding certain items from a category but allowing management the flexibility to exclude other items. Either a management approach to classification is being adopted or it is not being adopted.
- 48 EFRAG does not believe that restricting the financing section just to financial assets and financial liabilities is consistent with the management approach to classification applied elsewhere, and therefore does not support the proposal. We think that non-contractual liabilities, including some postemployment benefit plan liabilities, should not be excluded from the financing liability category.
- 49 The DP could in our opinion also be clearer as to whether the costs of the team that manages the entity's financing should (following the cohesiveness objective) be treated as a financing cost.

³ This is not the same as the case from paragraph 10 of the IAS 40 *Investment Property* which deals with properties where a portion is held to earn rentals or for capital appreciation and another portion that is held for use in the production or supply of goods or services or for administrative purposes. If these portions could be sold separately (or leased out separately under a finance lease), an entity accounts for the portions separately. If the portions could not be sold separately, the property is investment property only if an insignificant portion is held or use in the production or supply of goods or services or for administrative purposes.

QUESTIONS CONCERNING IMPLICATIONS OF THE OBJECTIVES AND PRINCIPLES FOR EACH FINANCIAL STATEMENT

Question 11

Paragraph 3.2 proposes that an entity should present a classified statement of financial position (short-term and long-term sub-categories for assets and liabilities) except when a presentation of assets and liabilities in order of liquidity provides information that is more relevant (paragraph 3.2). Is this presentational option in order of liquidity really necessary?

The short-term/long-term split

- 50 EFRAG agrees with the arguments in the DP. We would add two more:
- (a) complex entities often do not have a single operating cycle but many, one for each type of activity they undertake. Having more than one length of operating cycle makes it difficult to apply the existing requirements; and
 - (b) the existing current/non-current split is in practice also normally based on a one year notion and thus the current practice would not be significantly affected.
- 51 We support the proposal. However, we think the eventual standard should allow management flexibility as to whether the proposed split is provided on the face of the statement of financial position or in the notes. As already noted earlier in this letter, we think the disaggregation objective should not always require the information to be provided on the face of the financial statements, because that can obscure key messages.

The option

- 52 The DP proposes keeping the existing option to present assets and liabilities in order of liquidity, rather than on a current/non-current or short-/long-term basis. EFRAG supports this proposal because for some entities, for example deposit-taking or insurance companies, that typically have financial assets and financial liabilities with a wide range of maturity dates within a short time period, it would be arbitrary to specify any particular maturity date to distinguish two maturity sub-categories. (This is further discussed under question 11(a).)
- 53 On the other hand, recent events have reminded us that liquidity is a complex issue that is difficult to capture in a highly summarised way, so it is important that the messages coming from a liquidity presentation are treated with care by users.
- 54 EFRAG notes that, in the Amendment to IFRS 7 *Improving Disclosures about Financial Instruments* (issued in March 2009), a maturity analysis of non-derivative financial liabilities based on the remaining contractual maturity dates is required to be given. Bearing this in mind, we wondered whether it would be confusing—and perhaps even inappropriate—for the analysis in the statement of financial position to be prepared by reference to the shorter of contractual or expected maturity, which is what is proposed in the DP.

(a) What types of entities would you expect not to present a classified statement of financial position? Why?

55 We think that for entities (such as deposit-taking or insurance companies) that typically have financial assets and financial liabilities with a wide range of maturity dates within a short time period, it would be arbitrary to specify any particular maturity date to distinguish two maturity sub-categories. As a result, for those entities, the proposed short-term and long-term sub-categories will generally be too broad to provide useful information to users. In addition, it often is not feasible to provide more granular short-term maturity information in the statement of financial position. Moreover, for those entities, liquidity information is often more important than an arbitrary split between short-term and long-term. For these reasons, the users might derive more benefit from a presentation of assets or liabilities based more around liquidity.

56 On the other hand, we know of a number of banks that, despite this, choose not to present their statement of financial position on the basis of liquidity because they consider such a presentation also does not show useful information (because liquidity is too complex an issue to be effectively communicated through such a presentation). In the context it is worth noting that entities are required by the already mentioned Amendment to IFRS 7 to provide a maturity analysis of financial liabilities in the notes to the financial statements,⁴ and these disclosure requirements are in the process of being enhanced. We recognise that some would argue that this makes the option to present the statement of financial position on a liquidity basis unnecessary (see more about this issue under question 22), but as already explained we still favour retention of the option.

57 We note that, if an entity adopts a presentation based on liquidity, the DP proposes (in paragraphs 3.6 and 4.7-4.10) that it should also disclose in the notes information about the maturities of its short-term contractual assets and liabilities. It will be important to the way this is dealt with in any eventual standard takes into account the IASB's latest thinking on the same issue in other projects (such as IFRS 7).

(b) Should there be more guidance for distinguishing which entities should present a statement of financial position in order of liquidity? If so, what additional guidance is needed?

58 EFRAG believes in principle-based standards, and therefore would prefer to see less guidance rather than more. We do suggest however that that standard should require entities to explain (a) why they have chosen the presentation they have, and (b) the basis used for the presentation in order of liquidity.

⁴ Disclosures about liquidity risk include [IFRS 7.39]:

- (a) a maturity analysis for non-derivative financial liabilities (including issued financial guarantee contracts) that show the remaining contractual maturities.
- (b) a maturity analysis for derivative financial liabilities. The maturity analysis shall include the remaining contractual maturities for those derivative financial liabilities for which contractual maturities are essential for an understanding of the timing of the cash flows (see paragraph B11B).
- (c) a description of how it manages the liquidity risk inherent in (a) and (b).

Question 12

Paragraph 3.14 proposes that cash equivalents should be presented and classified in a manner similar to other short-term investments, not as part of cash. Do you agree? Why or why not?

- 59 EFRAG supports the proposed separation of cash from cash equivalents. In addition, we would also prefer the cash equivalents to be separated from the other short-term investments, preferably in the notes.

Question 13

Paragraph 3.19 proposes that an entity should present its similar assets and liabilities that are measured on different bases on separate lines in the statement of financial position (paragraph 3.19). Would this disaggregation provide information that is more decision-useful than a presentation that permits line items to include similar assets and liabilities measured on different bases? Why or why not?

- 60 EFRAG agrees that presenting similar assets and liabilities that are measured on different bases separately would result in more decision-useful information. However, we are not convinced that it is essential that it should be done through disaggregation on the face of the statement of financial position; we think providing the information in the notes is sufficient. Using the notes would also reduce the number of lines and captions that would be required to be shown in the statement of financial position, which we think is important because otherwise there is a risk that this proposal could make the statement of financial position long and less understandable.
- 61 We think it would also be useful to clarify exactly what the boards mean here when they talk about different measurement bases. For example, if an asset is carried at cost less an impairment provision, is that a different measurement bases to cost? Similarly, currently the various references in IFRS to fair value are not all interpreted to require exactly the same valuation approaches. Are they different measurement bases, or is the measurement basis fair value? How should an asset that is measured at the lower of cost or net realisable value be dealt with? For practical purposes, EFRAG thinks that the separate line requirement would become impractical were it to be applied to more than two basic measurement bases, so we suggest it focuses on cost-based amounts and current value amounts.

Question 14

Should an entity present comprehensive income and its components in a single statement of comprehensive income as proposed (see paragraphs 3.24–3.33 of the DP)? Why or why not? If not, how should they be presented?

- 62 IAS 1 *Presentation of Financial Statements* (issued in September 2007) requires an entity to present all items of income and expense recognised in a period either in a single statement of comprehensive income or in two separate statements (a statement displaying profit or loss (an income statement) and a statement of comprehensive income that begins with profit or loss and displays items of other comprehensive income). The DP proposes that the option to present two separate statements should be deleted; all entities should henceforth present a single statement of comprehensive income.

- 63 The DP goes on to propose that, within that statement, comprehensive income would be divided into profit or loss and other comprehensive income, so the current disaggregation between profit or loss/net income and other comprehensive income is maintained. The DP concludes that anything other than the approach proposed in the DP would involve a need to address recognition and measurement issues that are beyond the scope of the project.
- 64 EFRAG agrees that it would not be appropriate to make piecemeal changes to the profit or loss/other comprehensive income division; what is needed is a comprehensive consideration of the, in some cases complex, issues involved. We agree though that there is not enough time to do that at this stage if the DP is to result in a standard by 2011, and that as a result no changes should be made to the current division at this time. We therefore support the proposal that the existing division should be retained.

Question 15

Paragraph 3.25 proposes that an entity should indicate the category to which items of other comprehensive income relate (except some foreign currency translation adjustments) (paragraphs 3.37–3.41, see also pages 107 and 129). Would that information be decision-useful? Why or why not?

- 65 It seems to us that indicating whether an item of other comprehensive income relates to (or will relate to) an operating activity, investing activity, financing asset or financing liability should help users to understand better the relationship between the statement of comprehensive income and the statement of financial position and is therefore necessary if the cohesiveness objective that we support is to be met. We think it would also help users to understand better the section or category of profit or loss in which potential future reclassification adjustments will be presented in the future statements of comprehensive income, so we think it will result in decision-useful information.
- 66 We also believe that, for most items of other comprehensive income, making that identification should be straightforward.
- 67 The only item of other comprehensive income that the DP proposes an entity should not be required to identify with a section or category in the statement of financial position is a foreign currency translation adjustment on a consolidated subsidiary (and a proportionately consolidated joint venture)⁵. We agree with the proposal.

Question 16

Paragraphs 3.42–3.48 propose that an entity should further disaggregate within each section and category in the statement of comprehensive income its revenues, expenses, gains and losses by their function, by their nature, or both if doing so will enhance the usefulness of the information in predicting the entity’s future cash flows. Would this level of disaggregation provide information that is decision-useful to users in their capacity as capital providers? Why or why not?

- 68 EFRAG understands that users of financial statements want more ‘by nature’ information and that, if forced to choose, many would prefer to have ‘by nature’

⁵ This is because the translation adjustment may relate to more than one category of assets and liabilities in the statement of financial position.

information than 'by function' information. We therefore think it important that the standard resulting from this project helps to achieve that for users. However:

- (a) we are not sure whether the proposal in the DP will meet those user needs. That is because they seem to be suggesting that the primary disaggregation should be 'by function' (with a further disaggregation 'by nature') as long as that is useful, even if a 'by nature' disaggregation would be more useful. That sounds rather odd to us. Furthermore, we do not know whether users' desire for more 'by nature' information will be met by an approach that involves disaggregation first 'by function', then within that 'by nature'. We are concerned that it might not sufficiently address the weaknesses in the 'by function' disaggregation approach that cause users to prefer the 'by nature' approach.
- (b) we also understand that the proposed disaggregation first 'by function', then within that 'by nature' disaggregation might be quite difficult and costly to apply for certain industrial companies, particularly the 'by nature' analysis of cost of sales when the costs lose their by nature identity through the standard-cost process, variances and various inventory accounts. Indeed, we understand for many companies it would be less costly to provide separate 'by function' and 'by nature' disaggregations.

69 In other words, although we think it important to try to meet users' needs in this area, we are not sure whether the proposal does that but it does appear to be more costly for many preparers than the alternatives. EFRAG therefore believes it is very important that, during the proposed user field-testing, some of the work focuses on ensuring that users' precise needs in this area are understood and can be weighed against the costs involved.

70 If the IASB decides eventually to proceed with the proposal in the DP, we would suggest that entities deciding that it is not useful to provide the disaggregation 'by function' and within that 'by nature' should be required to explain why they believe that is the case.

Question 17

Paragraph 3.55 proposes that an entity should allocate and present income taxes within the statement of comprehensive income in accordance with existing requirements (paragraphs 3.56–3.62). To which sections and categories, if any, should an entity allocate income taxes in order to provide information that is decision-useful to users? Please explain.

71 EFRAG believes that, in theory, presenting income tax information in the same category as the related transaction would help users to assess the effectiveness of management's decisions, as the decision of whether to enter into a transaction is often made after considering the income tax consequences. Under this view, income taxes would be allocated to the categories/sections in the statement of comprehensive income (operating, investing, financing assets and financing liabilities, discontinued operations, OCI).

72 However, EFRAG would not be in favour of such an approach, because in practice the exercise would more often than not be little more than an arithmetical apportionment of the total charge between the individual items. Such apportionments provide little useful information.

- 73 Indeed, when the current IAS 1 was issued in September 2007, EFRAG's endorsement advice criticised the requirement that the entities disclose the income tax relating to each component of other comprehensive income on exactly those grounds:

"Most EFRAG members question the relevance of the information in practice, because in their view estimating the tax effects would involve a significant amount of judgement, approximation and arbitrariness, at least partly because of the interdependence between the different items of other comprehensive income. This arbitrariness in particular could be a problem for comparability, relevance and even reliability."

- 74 We continue to be strongly of that view, and would encourage the IASB to reconsider this part of the existing IAS 1.

Question 18

Paragraph 3.63 proposes that an entity should present foreign currency transaction gains and losses, including the components of any net gain or loss arising on remeasurement into its functional currency, in the same section and category as the assets and liabilities that gave rise to the gains or losses (paragraphs 3.63–3.69).

- (a) ***Would this provide decision-useful information to users in their capacity as capital providers? Please explain why or why not and discuss any alternative methods of presenting this information.***
- (b) ***What costs should the boards consider related to presenting the components of net foreign currency transaction gains or losses for presentation in different sections and categories?***

- 75 An entity may carry on foreign activities in two ways. It may have transactions in foreign currencies or it may have foreign operations. IAS 21 *The Effects of Changes in Foreign Exchange Rates* requires an entity to include in profit or loss the gain or loss resulting from translating either foreign currency transactions or foreign currency financial statements into the entity's functional currency, except that in certain cases a gain or loss is required to be recognised in other comprehensive income.
- 76 Although disclosure is required of the amount of exchange differences recognised in profit or loss for the period, the IAS 21 does not specify where in the statement of comprehensive income such differences should be presented. Very common practice today is that all exchange differences are included in the statement of comprehensive income as part of finance costs, although it is also acceptable to allocate the exchange differences to the various line items. For example, an entity might classify exchange differences on trade receivable arising from the purchase of inventory as part of cost of sale, and exchange differences arising from loans as parts of finance costs.
- 77 EFRAG notes that the proposed approach is consistent with the cohesiveness objective, seems sensible and would not be difficult or costly to do for an individual asset or liability denominated in a foreign currency.
- 78 On the other hand, we can also imagine circumstances where inter-company (or other) accounts that include both operating (transfers of products, royalties) and financing transactions (interest on loans) would have to be (probably largely arbitrarily) split between operating and financing transactions for the proposed

purpose. We can also see practical difficulties in allocating foreign exchange hedges that cover exposures in more than one category.

Net foreign currency transaction gain or loss on remeasuring an entity's local currency financial statements into its functional currency

- 79 When a reporting entity prepares financial statements, IAS 21 requires each individual entity included in the reporting entity—whether it is a stand-alone entity, an entity with foreign operations (such as a parent) or a foreign operation (such as a subsidiary or branch)—to determine its functional currency and measure its results and financial position in that currency [IAS 21.IN7].
- 80 The boards considered whether to require the components of the net foreign currency transaction gain or loss on remeasuring an entity's local currency financial statements into its functional currency to be classified in the same sections and categories as the assets and liabilities that gave rise to the net adjustment.
- 81 'Remeasurement' is the restatement of the foreign entity's financial statements from local currency that the entity used into the foreign entity's functional currency. Remeasurement is required only when the functional currency is different from the currency used to maintain the books and records of the foreign entity. It is worth noting that the term remeasurement cannot be found in the IFRSs but only in the U.S. GAAP, i.e. in the SFAS No. 52 *Foreign Currency Translation*, while within the IAS 21 for the same thing a more general term translation is used.
- 82 EFRAG does not support the boards' proposal to require the components of the net foreign currency transaction gain or loss on remeasuring an entity's local currency financial statements into its functional currency to be classified in the same sections and categories as the assets and liabilities that gave rise to the net adjustment. We think it would often be difficult to apply (for similar reasons to those given in paragraph 78 above, see also paragraph 3.68 of the DP), and would in many cases require a lot of arbitrary assumptions and allocations.
- 83 EFRAG thus believes that the net foreign currency transaction gain or loss should be included in a single category, but is at this point in time not sure in which category. In addition, we just do not know all the costs which would arise in relation to presenting the components of net foreign currency transaction gains or losses in different sections and categories.

Question 19

Paragraph 3.75 proposes that an entity should use a direct method of presenting cash flows in the statement of cash flows.

EFrag's current position on the direct vs. indirect method debate

- 84 In the paragraphs below we have responded to the questions the DP has asked about the respective merits of the direct and indirect methods of presenting operating cash flows. However, because those are very specific questions about a broader subject, we thought it would be helpful to start by explaining that, having considered the arguments in the DP, our preference is for the indirect method. In particular, we are not persuaded that the direct method provides information that is more decision-useful than an indirect method and therefore justifies the additional cost that would usually be involved.

(a) Would a direct method of presenting operating cash flows provide information that is decision-useful?

85 To start by answering the question that has been asked, EFRAG believes that a direct method of presenting operating cash flows does provide information that is decision-useful, largely for the reasons given in the DP. However, to answer a question that has not been asked, our discussions with users suggest to us that the indirect method also provides information that is decision-useful. Indeed, the majority of the users we have spoken to have said they actually prefer the indirect method, mainly due to the fact that it is linked to profit or loss. Indeed, in contrast to the comment in the DP about how users struggle to obtain the information they need from the indirect method, most of the users we have spoken believe they can get from the indirect method of presenting operating cash flows the same information they need and can get from the direct method.

(b) Is a direct method more consistent with the proposed cohesiveness and disaggregation objectives (see paragraphs 3.75–3.80) than an indirect method? Why or why not?

86 As we have said several times already, although we believe the cohesiveness principle—that the relationship between items across financial statements is clear and that an entity's financial statements complement each other as much as possible—is important, we believe that it should not be applied as an 'everything in the same order and disaggregated to the same degree' rule to meet that objective. For that reason, we do not see why the direct method should necessarily be viewed as being more consistent with the proposed cohesiveness objective than the indirect method.

87 The question also asks about the disaggregation objective, which is that an entity should disaggregate information in its financial statements in a manner that makes it useful in assessing the amount, timing and uncertainty of its future cash flows. We have discussed the boards' proposed adoption of the direct method of presenting operating cash flows with a number of users and our impression is that, while views vary and some users do find the direct method more useful than the indirect method, many more seem not to. We would have thought it follows from that that the direct method is not more consistent with the disaggregation objective than the indirect method.

(c) Would the information currently provided using an indirect method to present operating cash flows be provided in the proposed reconciliation schedule (see paragraphs 4.19 and 4.45 of the DP)? Why or why not?

88 As already stated above, when using indirect method, the cash flow from operations is the only cash flow amount in the operating category of the statement of cash flows. The first necessary condition to provide exactly the same information currently provided using an indirect method would be application of the by nature disaggregation of income and expense items in the statement of comprehensive income. We note that the DP proposes that ideally the by function disaggregation should be applied with the by nature disaggregation within those functions only to the extent that this will enhance the usefulness of the information in predicting the entity's future cash flows.

89 We believe that there are some substantive similarities between the indirect method and the proposed reconciliation schedule, but just the example of 'changes in accounts receivable'—which would be aggregated in the 'accruals,

allocations and other' column somewhere between 'cash received from customers' and 'sales'—shows that it would not be identical.

Other issues relating to the proposals in this paper and a summary of our views

- 90 To conclude on the technical merits of the proposal, EFRAG believes that the DP has not made a sufficiently persuasive case that the direct method of presenting operating cash flows provides information that is more decision-useful than an indirect method. In addition, we do not think that the direct method is necessarily more consistent with the proposed financial statement presentation objectives than the indirect method. As we explain in our response to question 20, it is also clear that there are concerns about the relative cost of implementing the direct method. But, perhaps most important of all, the users we have spoken to tell us that they prefer the indirect method.
- 91 EFRAG's view, having considered all the factors involved (including cost), is that the indirect method of presenting operating cash flows in the statement of cash flows is the preferable approach. We are therefore against the proposed mandatory use of the direct method for this purpose, and support the existing presentation option in the IFRSs. In addition, EFRAG proposes that the boards further explore relevance of statements of cash flows for financial institutions.

Question 20

What costs should the boards consider related to using a direct method to present operating cash flows (see paragraphs 3.81–3.83 of the DP)? Please distinguish between one-off or one-time implementation costs and ongoing application costs. How might those costs be reduced without reducing the benefits of presenting operating cash receipts and payments?

- 92 EFRAG thinks that the one-off implementation costs would differ depending on whether the necessary information would be collected directly or derived indirectly using the so called 'indirect direct method'.
- (a) The one off costs to collect the information directly would probably involve setting up systems to analyse flows on cash/bank accounts. It is probably fair to say here that the more detailed these systems are (e.g. for a line-by-line analysis cohesive with the statement of comprehensive income), the more costly they will be. That would also probably apply to the ongoing costs of such a system; collecting information this way in a complex modern industrial environment would be quite difficult, especially in the current framework of the accrual-basis information in the other statements.
- (b) As a result, many entities would collect the direct cash flow information using the less costly 'indirect direct method'. When using 'indirect direct method' preparers actually do not need to go all the way back to original transactions to trace the individual cash flows, but can indirectly obtain them by adjusting individual profit or loss items for the noncash changes in underlying individual assets and liabilities (in other words, by 'backing out' the direct cash flows from the accruals-based information in the other statements). Nevertheless, we have been told that for complex entities even such a collection of information would often not be practically achievable at a reasonable cost. Furthermore, this method—which is sometimes referred to as the Australian-style statement of operating cash flows ('Cash received from customers' minus 'Cash paid to suppliers and employees')—will, we understand, often provide information that is insufficient for users, who would

probably want supplementary indirect-method disclosures to understand better the link between operating profit and operating cash flows.

- (c) It has also been suggested to us that, whatever the costs, they would be purely compliance costs without any benefit for internal planning and control purposes.

Question 21

On the basis of the discussion in paragraphs 3.88-3.95, should the effects of basket transactions be allocated to the related sections and categories in the statement of comprehensive income and the statement of cash flows to achieve cohesiveness? If not, in which section or category should those effects be presented?

- 93 In present practice, the effects of basket transactions are often presented in a single line item in the statement of comprehensive income and in the statement of cash flows. For example, IAS 7 *Statement of Cash Flows* requires specific disclosures relating to obtaining and losing control of subsidiaries or other businesses during the period; some of the transactions covered by those requirements would meet the definition of a basket transaction. Similarly, IFRS 5 requires the separate presentation in the statement of comprehensive income of discontinued operations.
- 94 The DP explains that, although the boards believe that it is appropriate to classify and present the assets and liabilities acquired in a basket transaction in the appropriate sections and categories in the statement of financial position, it is not obvious how the effects of basket transactions should be classified in the statements of comprehensive income and cash flows. The effects of basket transactions could be classified:
- (a) in more than one section or category, thereby requiring an allocation of the total effect; or
 - (b) in a single section or category, what would not require allocation of the total effects. The DP discusses three possible approaches that could be adopted if the total effects are not to be allocated:
 - (i) Alternative A: Present in the operating category (practical expedient).
 - (ii) Alternative B: Present in the category that reflects the activity that was the predominant source of those effects (similar basis already applied in the proposed classification of items).
 - (iii) Alternative C: Present in a separate section (the most prominent exception to cohesiveness principle).
- 95 The DP reaches no conclusions on this issue and therefore makes no proposal.
- 96 EFRAG thinks that this is another area where cohesiveness needs to be tempered with pragmatism. Users need information that enables them to understand the effect of the basket transaction on the entity's financial information, and ideally this information is needed at the disaggregated level. Our preference would be to apply Alternative B (i.e. — to present the effects of basket transactions in the category that reflects the activity that was the predominant source of those effects) – which is out of all three of the 'non-allocation' options in our view the most consistent with

cohesiveness objective, with the requirement that the effects of each basket transaction need to be disclosed in the notes on a disaggregated basis.

- 97 We note that, with regard to acquisitions for example, acquired businesses are very often integrated as rapidly as possible into existing businesses so that, by the end of the financial year, their assets and liabilities are no longer distinguishable and their separate results for the period since acquisition would have been most likely subject to a significant degree of estimation.
- 98 Less crucially, the boards should in our opinion consider a change of terminology. We suggest the term 'acquisitions and divestments of a bundle of assets and/or liabilities' as one possible alternative for the kind of things the boards appear to have in mind. We recognise the term is not as short as 'basket transaction', but it is far more descriptive and if we wish to keep accounting as simple as possible we need to use more terms that are descriptive.

QUESTIONS CONCERNING THE PROPOSED ADDITIONAL NOTES TO THE FINANCIAL STATEMENTS

Question 22

Should an entity that presents assets and liabilities in order of liquidity in its statement of financial position disclose information about the maturities of its short-term contractual assets and liabilities in the notes to financial statements as proposed in paragraph 4.7? Should all entities present this information? Why or why not?

- 99 We agree that note information about maturity should be provided if a presentation based on liquidity has been used, and that that information should cover both short- and long-term contractual assets and liabilities. This disclosure would affect mainly banks and insurance companies, where at least in banks the information should be readily available. However:
- (a) in responding to the IFRS 7 ED we queried the usefulness of maturity analyses based on contractual maturity dates where the liquidity risk involved is measured on some other basis; in our view expected maturity date is generally more useful, although some indication of the implications of any significant changes in those expectations would be useful;
 - (b) as already mentioned under Question 11, the Amendment to IFRS 7 *Improving Disclosures about Financial Instruments* (issued in March 2009) requires entities to provide a maturity analysis of non-derivative financial liabilities based on the remaining contractual maturity dates. A similar maturity analysis should be given for derivative financial liabilities if contractual maturities are essential for an understanding of the timing of the cash flows (paragraph 39). We would be particularly concerned were the IFRS 7 analysis to be done on one basis (remaining contractual maturity date) whilst the statement of presentation order and related note disclosure to be done on a different basis (the shorter of the contractual maturity and expected realisation or settlement). We therefore think it would be preferable, in order to avoid confusion, for this disclosure to be dealt with in the context of IFRS 7 rather than within the FSP project;
 - (c) EFRAG notes that the terms 'contractual asset' and 'contractual liability' are not defined in the current IFRSs, so we are not sure what was meant by

these terms. We are also unsure what the benefits are of focusing just on the contractual items.

Question 23

Paragraph 4.19 proposes that an entity should present a schedule in the notes to financial statements that reconciles cash flows to comprehensive income and disaggregates comprehensive income into four components: (a) cash received or paid other than in transactions with owners, (b) accruals other than remeasurements, (c) remeasurements that are recurring fair value changes or valuation adjustments, and (d) remeasurements that are not recurring fair value changes or valuation adjustments.

(a) Would the proposed reconciliation schedule increase users' understanding of the amount, timing and uncertainty of an entity's future cash flows? Why or why not? Please include a discussion of the costs and benefits of providing the reconciliation schedule!

100 We think that the proposed reconciliation schedule is conceptually a very interesting idea. We understand that financial statements are prepared to meet the reasonable information needs of users and that, as financial reporting gets more sophisticated and increasingly reflects non-cash items and other events, including remeasurement, it will not be sufficient to provide merely a vertical disaggregation of broad categories of income and expense into narrower income and expense categories; a horizontal disaggregation into the different types of element making up an item of income or expense (i.e. cash flows, accruals and remeasurements) might be needed.

101 However, we are not currently convinced by the proposal, for several reasons:

- (a) We will be very interested to see what the field testing the boards are currently carrying out will reveal, but our instinct is that the reconciliation schedule will result in a lot of numbers being disclosed, only some of which will be useful enough to justify the resources spent on providing them.
 - (i) If that is the case, it might be better to develop a disclosure that requires reconciliation of just some most important items. Such a requirement would probably meet the majority of users' information needs without imposing too much burden on the preparers. For example, a number of users have told us that they attach a high priority to a reconciliation of net debt, while the DP is silent on this issue.
 - (ii) We suspect the concerns will be with the accruals column. For example, is it really so important and beneficial to see, for example, the difference between 'cash paid for marketing personnel expenses' and 'marketing personnel expenses' explained? We are aware of some of the academic research referred to in the DP but nevertheless wonder whether this is an aspect of the proposal that could be simplified. Another concern could be a strict line-by-line reconciliation of the 'by nature within the by function' disaggregated operating expenses with the cash outflows might prove costly and thus hinder the practical implementation of the proposed schedule.
- (b) We note that the proposed reconciliation schedule is closely connected with the proposed mandatory use of the direct method of presenting operating

cash flows in the statement of cash flows and that all the 'pros' and 'cons' of the whole 'package' have to be carefully weighed. However, we think that the benefits of line-by-line cohesiveness between the statement of comprehensive income and statement of cash flows and line-by-line reconciliation of the two statements need to be clearer and more persuasive if this close connection is to be a significant factor. Feedback that we have got from the users indicates that a properly presented indirect-method cash flow statement reconciling operating profit with operating cash flow provides them with enough information to satisfy their information needs.

102 Therefore in our view, rather than proceed with the reconciliation schedule propose, we suggest the disclosure should be scaled down and should focus on the numbers that would have been disclosed in such a schedule that are considered the most useful.

(b) Should changes in assets and liabilities be disaggregated into the four components described in paragraph 4.19 of the DP? Please explain your rationale for any component you would either add or omit.

103 As we have already said, we think the proposed reconciliation schedule will involve a lot of numbers being disclosed, only some of which will useful enough to justify providing them. This concern probably relates most to the 'accruals other than remeasurements' column; we think most of the numbers in that column will usually be of relatively little information value. We realise that it is a necessary condition for the complete reconciliation between both flows statements, but wonder whether this kind of line-by-line reconciliation is really necessary and useful.

104 We recognise that research suggests that it can make a difference to users whether a number in the statement of comprehensive income is based on a cash transaction or an accrual, but our discussions with users suggest to us that it will generally be only the bigger and more long-term accruals that will be of interest to them.

105 The DP also reports that users want the additional information on remeasurement that Columns D (remeasurements that are recurring fair value changes or valuation adjustments) and E (remeasurements that are not recurring fair value changes or valuation adjustments) of the schedule would give them. We support this aspect of the proposal and think that the proposal should probably be amended to concentrate on that aspect.

(c) Is the guidance provided in paragraphs 4.31, 4.41 and 4.44–4.46 of the DP clear and sufficient to prepare the reconciliation schedule? If not, please explain how the guidance should be modified.

106 We have not so far identified any issues on respect of which additional guidance would be necessary, bearing in mind that IFRSs represent a principles-based set of standards.

Question 24

Should the boards address further disaggregation of changes in fair value in a future project (see paragraphs 4.42 and 4.43 of the DP or paragraphs below)? Why or why not?

107 The DP notes that IFRSs currently provide limited guidance on whether and how an entity should disaggregate and present changes in the fair value of a financial

- instrument in the statement of comprehensive income. For example, an entity might disaggregate a change in the fair value of an interest-bearing instrument into changes attributable to current period interest accrual, other interest rate changes, credit risk changes, foreign currency changes and other changes and present those changes separately in its statement of comprehensive income.
- 108 Because there is only limited guidance on this issue, in some cases a change in fair value may appear *as a single line item* in the statement of comprehensive income, and in other cases different components of a change in fair value may appear in separate line items. Some users have stated that the loss of information from not disaggregating the changes in fair values of financial instruments could be significant and that the statement of comprehensive income would have greater analytical value if the sources of the changes were identified and presented.
- 109 Another consequence of the limited guidance on this issue is that an entity may present changes in the fair value of a financial instrument in line items that include amounts relating to a similar instrument measured on a cost basis,⁶ which raises concerns that the presentation is not consistent with the method of accounting. For example, presenting a gain or loss arising from a change in the fair value of a financial instrument in three line items—contractual interest, 'incurred' credit losses (comparable to what is required by IAS 39 *Financial Instruments: Recognition and Measurement*), and 'other'—does not appear consistent with a fair value measurement basis. This DP does not address disaggregation of the changes in fair values of financial instruments beyond the limited guidance that is currently in IFRSs. Doing so would require the boards to address recognition and measurement issues, which are beyond the scope of this project.
- 110 EFRAG's comment letter on the IASB Discussion Paper *Reducing Complexity in Financial Reporting* (issued 30 September 2008) pointed out that there is a widely held view that, in order to enhance user understanding of reported fair values, gains and losses reported in earnings need to be disaggregated into various categories and that this disaggregation needs to go far beyond what is contemplated currently in the (phase B) financial statement presentation project. We would therefore support the IASB carrying out further work on the subject.

Question 25

Should the boards consider other alternative reconciliation formats for disaggregating information in the financial statements, such as the statement of financial position reconciliation and the statement of comprehensive income matrix described in Appendix B, paragraphs B10–B22? For example, should entities that primarily manage assets and liabilities rather than cash flows (for example, entities in the financial services industries) be required to use the statement of financial position reconciliation format rather than the proposed format that reconciles cash flows to comprehensive income? Why or why not?

- 111 EFRAG notes that all the various alternatives appear to be substantial items of disclosure that would involve a substantial amount of work. It seems to us that the first thing to do therefore is to identify what the objective is, because if that objective can be properly defined (and is deemed worthy of being met), that should tell us a lot about the form the disclosure should take. Our concern about the discussion in the DP is that there still appears to be considerable difference of

⁶ This would be largely solved with the DP's proposal that an entity should present its similar assets and liabilities that are measured on different bases on separate lines in the statement of financial position, what would also separate different measurement basis gains and losses.

opinion as to what the objective is, hence the very different reconciliations being proposed—each of which appears to provide a different (but overlapping) set of additional information.

- 112 We note, for example, that the CFA Institute⁷ has previously argued for an approach that is very similar to the DP's statement of financial position reconciliation on the grounds that it is essential to its goal of increasing the transparency and understandability of companies' financial reporting and disclosures. Other users seem to have other objectives in mind. For example, a number of users have told us that they attach a high priority to a reconciliation of net debt (something which the DP is silent about). And the boards seem to be focusing on a different objective again.

Question 26

The FASB's preliminary view is that a memo column in the reconciliation schedule could provide a way for management to draw users' attention to unusual or infrequent events or transactions that are often presented as special items in earnings reports (paragraphs 4.48–4.52). As noted in paragraph 4.53, the IASB is not supportive of including information in the reconciliation schedule about unusual or infrequent events or transactions.

(a) *Would this information be decision-useful to users in their capacity as capital providers? Why or why not?*

- 113 Our understanding is that users would like to have information about events and transactions that are genuinely unusual or infrequent, because it enables them to identify the recurring/sustainable numbers and use those to make assessments about the future. This seems to us to be a reasonable information need that should be met if possible.
- 114 If the information is to be provided in the financial statements (as opposed to, for example, the management commentary), we think the terms need to be defined. On the other hand we would not support the reintroduction of extraordinary items by another name, so it is important to us that the presentation approach does not feel like the 'extraordinary item' notion.
- 115 Furthermore, we are not very keen on the proposal that the information be presented in a memo column in a reconciliation schedule. Partly this is because we have concerns about the reconciliation schedule itself (see above our responses to questions 23-25). However, it would also involve including, in a disclosure intended to provide information about the types of event that have effected individual lines in the statement of comprehensive income, information prepared for a different purpose. Including both in a single disclosure would make the reconciliation schedule even more what we want to avoid it becoming: a rag bag of data that users search through to try to find information of use to them. We think the information provided in financial statements should be of a higher order than that.

⁷ See CFA Institute (2007): A Comprehensive Business Reporting Model: Financial Reporting for Investors, July 2007, pp. 29-35.

(b) APB Opinion No. 30 Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions, contains definitions of unusual and infrequent (repeated in paragraph 4.51). Are those definitions too restrictive? If so, what type of restrictions, if any, should be placed on information presented in this column?

116 EFRAG is divided on whether it would be preferable to develop definitions and require the information to be provided in the financial statements or to recommend appropriate disclosures in the management commentary.

(c) Should an entity have the option of presenting this information in narrative format only?

117 Since EFRAG is divided on the preferable solution, we are not able to answer this question.

Other comments

Unrecognised assets and liabilities

118 The DP does not explicitly refer to the issue of classification of expenditures and expenses related to unrecognised assets. We note however that this issue has needed to be addressed twice by the IASB recently, in the 2007 Annual Improvements Standard and in the 2008 Annual Improvements ED.

119 For example, the 2008 Annual Improvements ED addressed the concerns arising from the fact that some entities classify such expenditures as cash flows from operating activities and others classify them as investing activities. Examples of such expenditures are those for exploration and evaluation activities. The ED proposed to amend IAS 7 to state that only an expenditure that results in a recognised asset in the statement of financial position can be classified as a cash flow from investing activities.

120 Improvements to IFRSs, which were issued in April 2009, accepted the proposed amendments to IAS 7. We note that this would also apply to initial expenditures for development activities that do not meet the recognition criteria from IAS 38 *Intangible Assets*, which would be allocated to 'operating activities' under the proposed amendment even though it could be argued that these expenditures could also have been made as part of an entity's investing activities.

121 We are aware that this is a slightly different issue than the one in the DP, where the 'correct' classification is determined first by classifying the assets and liabilities, then applying that same classification to related income, expense and cash flow items. Our issue is whether the management approach would also be applied to the expenditures and expenses related to unrecognised assets. (So, if an entity views a particular type of unrecognised asset as an operating asset, it would classify the flows arising from that asset as operating too.) We think it would be useful if the boards' position on this issue could be clarified in the ED that will be developed from the DP.

Held-for-sale items

- 122 In our opinion it would also be helpful to have some indication how the boards foresee 'assets held for sale' being categorised. (They relate, or at least did relate, to the 'core' activities but no longer have the same relationship with the operations, see also paragraph 23.)
