File Reference: Proposed FSPs FAS 115-a, FAS 124-a & EITF 99-20-b and FSP FAS 157-e

Dear Mr. Golden:

I appreciate the opportunity to comment on the proposed FASB Staff Position No. FAS 115-a, FAS 124-a and EITF 99-20-b, Recognition and Presentation of Other-Than-Temporary Impairments ("proposed FSP #1") and on the proposed FASB Staff Position No. FSP FAS 157-e, Determining Whether a Market is Not Active and a Transaction is Not Distressed ("proposed FSP #2").

I commend the Financial Accounting Standards Board ("FASB") for providing greater clarity to investors about the credit and noncredit component of an other-than-temporary impairment ("OTTI") event and to more effectively communicate when an OTTI event has occurred. However, as noted below, I am concerned about the effective date and transition process associated with proposed FSP #1. I am also concerned that by attempting to provide additional authoritative guidance in determining whether a market is not active and a transaction is not distressed (proposed FSP #2), FASB has introduced a high degree of subjectivity and a lack of clarity because the current proposal does not provide enough practical guidance and specificity, resulting in a failure to meet its stated objective of improving financial reporting by addressing these fair value measurement application issues in this manner.

Effective Date of Proposed FSP #1

The proposed FSP #1 represents a step in the right direction. I believe the amount of any impairment loss recognized in earnings for investment securities classified as either held-to-maturity ("HTM") or available-for-sale ("AFS") should be based only on the credit component of the difference between the carrying amount of the instrument and fair value of the instrument as the credit component alone provides useful and meaningful information because it informs users of the actual amount expected to be realized. I further believe that the noncredit component should not be recorded in OCI, but rather included in a footnote disclosure.

However, as currently drafted, proposed FSP #1 would be effective for interim and annual reporting periods ending after March 15, 2009, and would be applied prospectively. Therefore, this guidance would not allow any noncredit losses to be included in OCI, rather than in retained earnings, prior to the first quarter of 2009. I believe that the effective date should be for financial reporting periods ending December 31, 2008 and after.

FASB's proposal to apply prospective treatment under the FSP does not provide for a more uniform system of impairment testing standards for financial instruments because an entity would have applied one accounting treatment for OTTI on or before year-end 2008, and a different
accounting treatment for OTTI beginning in 2009. This difference in accounting treatment greatly reduces financial statement comparability and transparency. Therefore, I believe that it would be more consistent for the proposed FSP to be made retroactive to year-end 2008 or alternatively, include a one-time cumulative “catch-up” adjustment between OCI and retained earnings in the first quarter of 2009.

Use of Subjectivity in Determining Whether a Market is Not Active and a Transaction is Not Distressed

As currently proposed, I am concerned that applying the proposed guidance included in proposed FSP #2 introduces a high degree of subjectivity and a lack of clarity into the determination of whether a market is not active and a transaction is not distressed.

I note that paragraph 11 of proposed FSP #2 definitively lists seven factors “that indicate that a market is not active.” However, the guidance also notes that “those factors should not be considered all inclusive because other factors may also indicate that a market is not active.” To this point, paragraph 12 of proposed FSP #2 states that “after evaluating all factors and considering the significance and relevance of each factor, the reporting entity shall use its judgment in determining whether the market is active.” As an additional example, I note that paragraph 13 of proposed FSP #2 does not quantify how much time is sufficient in referring to “sufficient time before the measurement date to allow for usual and customary marketing activities for the asset.” These examples neither instill confidence that one reached the correct result, nor that the result would be consistently verifiable among users, investors, auditors, etc. This overall lack of clarity will make auditing this guidance very difficult.

As a result of the issues noted above, we do not believe that proposed FSP #2 will meet its stated objective of improving financial reporting by addressing these fair value measurement application issues in this manner.

I thank the Board for its consideration of our views and welcome the opportunity to discuss this matter with the Board and its staff. Please do not hesitate to contact Thomas S. Davis, CFO at (616) 514-1807 with any questions.

Sincerely,

Thomas S. Davis
