Dear Director of FASB,

This letter is a response to the invitation of comments on “Proposal for Principles-Based Approach to U.S. Standard Setting” (hereinafter Proposal). In the proposal disclosure, the FASB briefly presents the objectives, reasons, and the format of the new approach, and analyzes the potential cost-benefits. Basically, I agree with the FASB opinions, and I believe the proposal will motivate more persons who are concerning the accounting to contribute their wisdom.

Three issues, which are shortcomings of current approach to the standard setting, justifications of demand for principles-based approach, and development of reporting framework, will be discussed in this letter.

**Shortcomings of Current Approach to the Standard Setting**

- **Try to give best standards.** The current accounting system tries to give us what is best. However, there may be a lack of consensus on the best reporting system because accounting reporting has significant economic consequences to its constituencies. The selection among financial reporting systems can be viewed as an issue of social choice involving trade-off among constituencies. Standard-setting process, as a whole, actually reflects the compromise between interests of different individual groups, so there is no best standard. Targeting best standards leads to heavily focusing on details, and leads to more discrepancies and controversies among standards.

- **Excessive documentation.** The detailed-orientation of current standard setting leads to excessive documentation, and leads to the status under which there are few persons who have time to read and understand all materials. Consider the standards about lease; there are 15 statements and 23 interpretations; which may have 800 pages in total. There is not a living man who understands it all.

- **Lead to undetected errors.** Complicated regulations often lead to undetected errors among preparers and auditors of financial statements. This puts auditors, investors and accountants at risk. The current standards are far beyond simplicity for the sake of accuracy and consistency and for the sake of understandability.

---

1 See Attachment
No one is ready to have a theoretical pure dissertation on the accounting for certain transactions that only a handful of people can decipher and bookkeep.

- **Does not facilitate harmonizing with IASB.** The IASB has promulgated a principals-based system. If we move to broader, more principles-based accounting standards, such as those used in other parts of the world, would facilitate better reporting in the United States.

- **Drive accounting teaching emphasis on particular standards.** The current standard setting drives that the accounting teaching to focus heavily on particular standards rather than critical issues. The fundamental theory and critical issues that develop students’ professional ethic and critical thinking are not addressed in the textbook. The accounting textbook looks more like the duplication of GAAP. It does not facilitate judgment or creative thinking ability. Students spend a lot of time remembering the details rather than the justifications or theories behind the standards. This wastes intellectual resources.

**Justification of Demand for the Principles-Based Approach**

Except for the shortcomings of the current approach, the reform needed is based on the following justifications.

- **Provide more reliable and relevant information in time.** It can be expected that the new approach will improve the quality and transparency of U.S financial accounting and reporting. Relevance and reliability are the primary qualities of decision-useful information. Since principles-based approach will focus on the major problems related to the quality of accounting information, the standard setting must be simplified. For example, the standards are much more simplified in the proposal attachments than those in original statement. This will make the standard more understandable and workable. Therefore, it is more possible for accountants to provide reliable and relevant information than before.

Some persons may concern about that a principles-based approach could reduce the comparability of financial information and leave too much room for judgment by companies and auditors. **First,** we should admit that the situation may happen; but given the premises of the new approach, the divergence can be minimized to the extent that the impacts on quality of information are not substantial. **Second,** compared with detailed accounting standards, the proposed standards under a principal-based approach are easier to use and less costly to implement. **Third,** a principles-based approach may greatly alleviate structuring transactions that meet the literal requirements of the rules -- but ignore the intent and spirit of the standards, it facilitate comparability of accounting information in substance rather in form. **Most importantly,** the FASB can keep the thing on track by developing professional ethics and other remedy measures. In contrast to worries, I believe that the comparability will be increased rather than decreased if the whole profession takes prudent attitudes to this problem.
• Facilitate the harmonizing with IASB. Given globalization of the economy, truly international accounting standards are needed to increase transparency and spur cross-border investment. The goal of the convergence project in accounting is to unify accounting standards, which in turn, should improve comparability of financial statements across national jurisdictions. It is clear that investors globally could benefit to the extent that transparency and high quality information might be provided by a common worldwide approach. In order for that to happen, U.S. accounting standards must undergo some heavy revisions in a relatively short time.

Harmonizing with IASB not only benefits accounting profession, but also benefits all the participants in the capital market. Foreign firms will benefit from it, because their costs are reduced; Investors will benefit from it, because they have more opportunities to invest; U.S markets will benefit from it, because it improves the market efficiency, increases the attraction of U.S markets to global capital; U.S economy will benefit from it, because they have more blood.

• Facilitate cultivating high-quality accounting talents. The FASB not only could play a major role in enhancing the value of accounting rule, making sure the language is easy to understand, but also play important roles in cultivating accounting talents. As pointed above, the current standard setting drives the accounting teaching focusing on interpretation of GAAP, it is expected that the principles-based approach will change the way of accounting teaching, and facilitate students to creative and critical thinking abilities.

Development of New Conceptual Framework

So far, the FASB has issued six conceptual statements, which are about objectives of financial reporting, qualitative characteristics of accounting information, basic elements of financial reports, and measurement and recognition in financial statement. Accounting conceptual framework provides a necessary common conceptual underpinning. The primary use of the framework is to make sure the FASB does not issue standard in a random fashion.

I disagree with that the Board need to develop an overall reporting framework as in IAS1. Holding this point is not only because the framework plays fundamental roles in accounting reporting, but also because the framework is a crystal after intensively struggling against different thoughts. If we look back at the generating process of conceptual framework, we can see the intensive argument of different opinions behind the statements. For example, definitions of assets and liabilities are the product of “assets and liability view” and “revenue views”. Most importantly, no one of FASB framework and the IASB framework is perfect even they have differences.

But I advocate making some changes of conceptual framework to meet the needs of the new approach, and to reflect the fruits of researches in recent two decades. There are several factors that need to be considered before any action is taken to the conceptual framework.
First of all, we need to clarify what problems are derived from the current conceptual framework in current standards-setting. Secondly, when we shift to the principals-based setting, what kind of conceptual framework do we need? As I said in the above, the current conceptual framework is not perfect, we need to develop new concepts, and revise some concepts, such as liability concept.

Thirdly, it depends on the extent to which FASB conceptual framework harmonizes with IASB conceptual. Differences exist between the FASB conceptual framework and the IASB conceptual framework. None of the frameworks are perfect. For example, matters of financial statement presentation and display were neither addressed by FASB, nor addressed by IASB. The FASB’s framework has its merits, it is not realistic to give up the FASB’s conceptual framework and adopt the IASB’s framework. However, it is a current trend to harmonize the framework worldwide, so it is necessary to enrich, and revise our conceptual framework.

Fourthly, In historic perspectives, the FASB’s framework was developed two decades ago. Since then, business and financial activities have changed considerably and have become increasingly complex. As a result, many of the issues of today are different and more complex than those that were contemplated when the framework originally was developed. For this reason, some updating of framework may be both desirable and necessary to enable it to better cope with the issues of today and tomorrow.

Overall, changing standards-setting to principles-based approach is a systematic engineering, it needs well-designed and prudent implementation. I am glad to see that the FASB take a significant step to the right direction, and have an opportunity to participate in the process, make my contributions.
